

Exploring Peritumoral White Matter Fibers for Neurosurgical Planning

Sonia Pujol, Ph.D.

Ron Kikinis, M.D.

Surgical Planning Laboratory

Harvard University

Clinical Goal

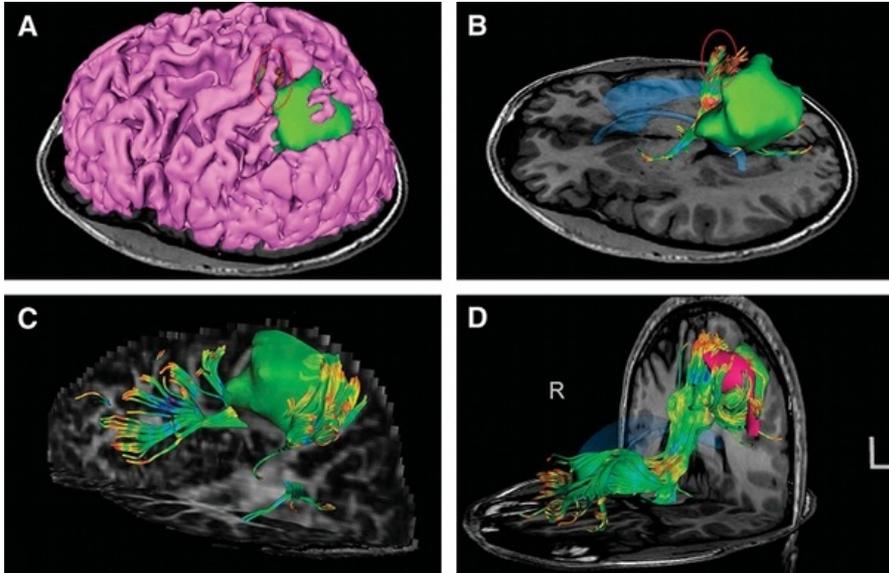

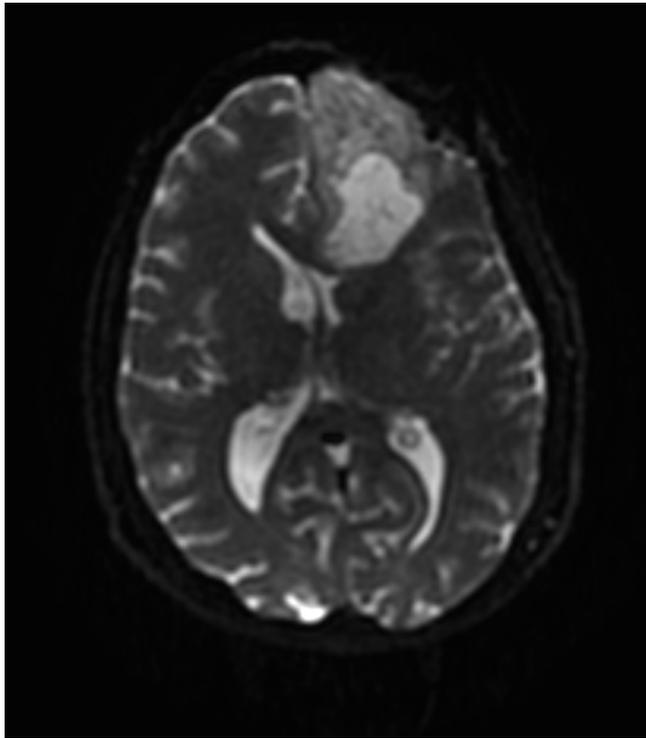

Image Courtesy of Dr. Alexandra Golby, Brigham and Women's Hospital, Boston, MA..

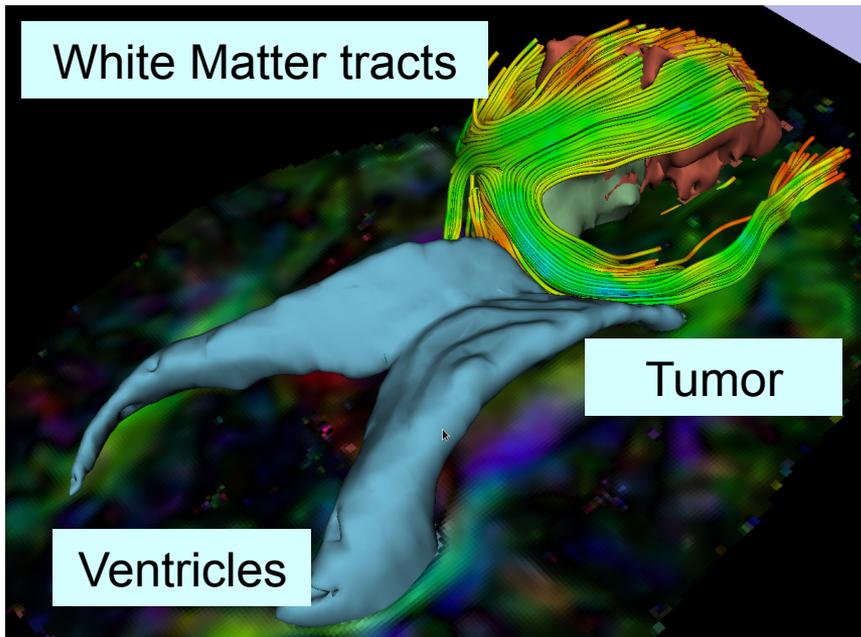

Diffusion Tensor Imaging (DTI) Tractography has the potential to bring valuable spatial information on tumor infiltration and tract displacement for neurosurgical planning of tumor resection.

Clinical Case

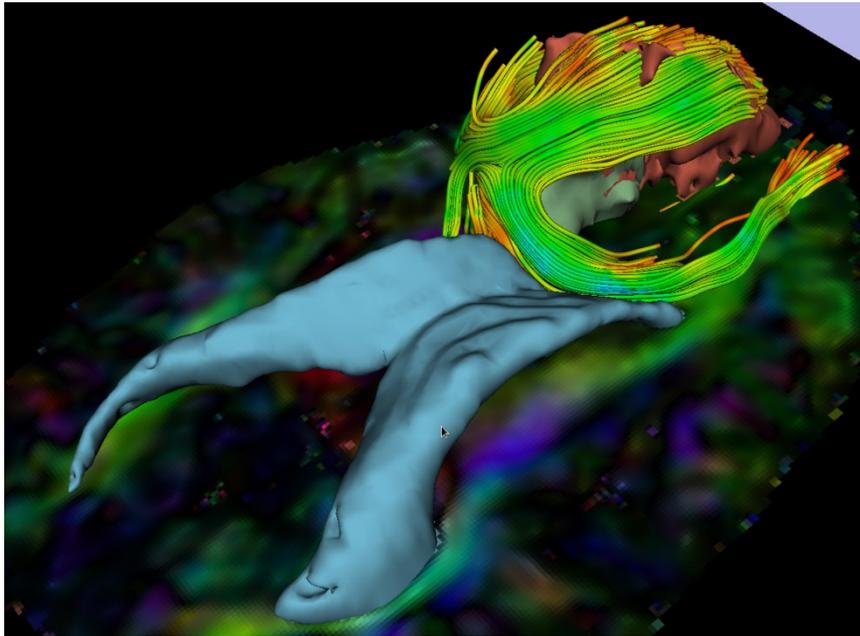

- 35 year-old male diagnosed with Glioblastoma multiforme (GBM)
- Diffusion Weighted Imaging (DWI) acquisition for neurosurgical planning

Clinical Goal

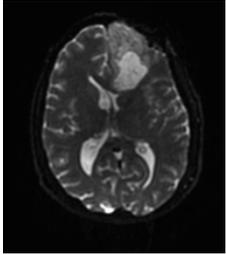

The goal of this tutorial is to explore white matter fibers surrounding a tumor using Diffusion Tensor Imaging (DTI) Tractography.

Image Analysis Pipeline

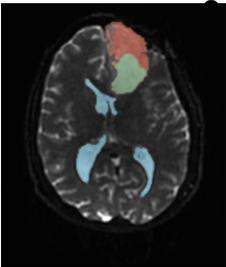

The image analysis pipeline described in this tutorial uses three different algorithms: the “Grow Cut” algorithm for segmentation of the tumor parts, the Marching Cube algorithm for surface modeling, and the single tensor streamline tractography algorithm for tract generation.

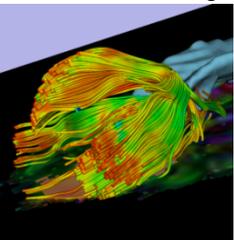

Overview of the analysis pipeline

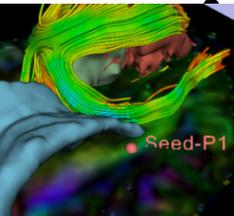

Part 1: Loading & Visualization of Diffusion Data

Part 2: Segmentation of the ventricles, and solid and cystic parts of the tumor

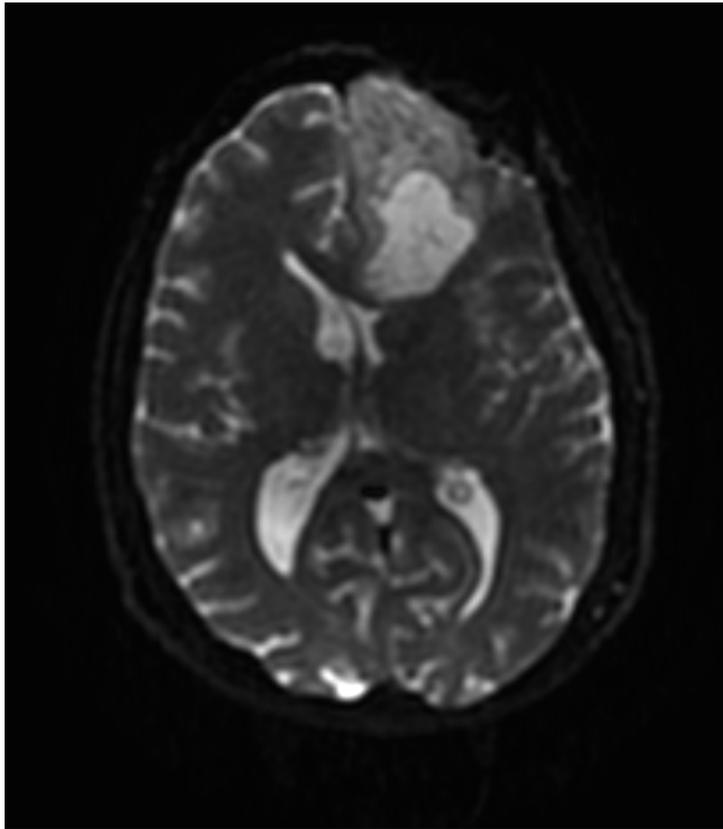

Part 3: Tractography reconstruction of the white matter fibers in the peri-tumoral volume

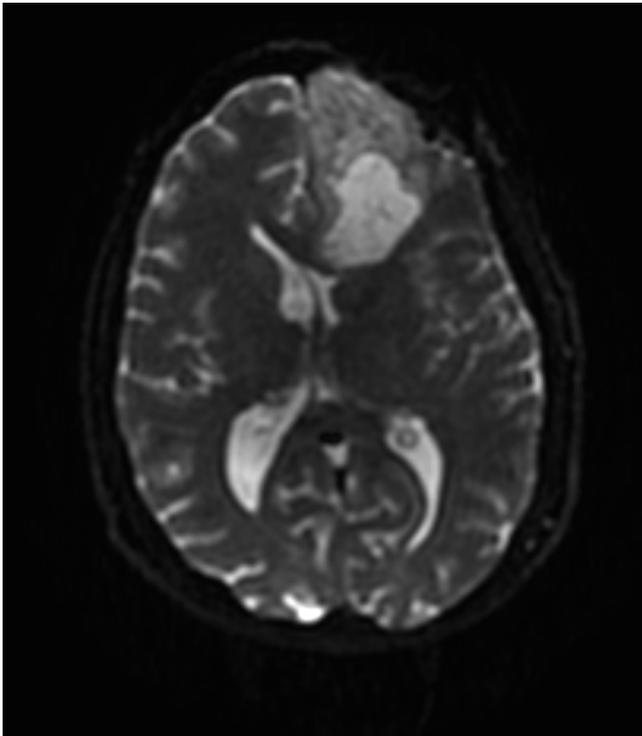

Part 4: Tractography exploration of the ipsilateral and contralateral side

Part 1: Loading and Visualization of Diffusion Data

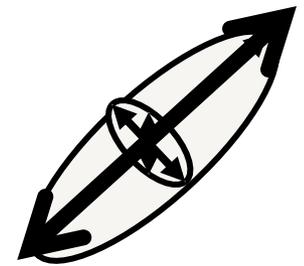

Diffusion Tensor Imaging

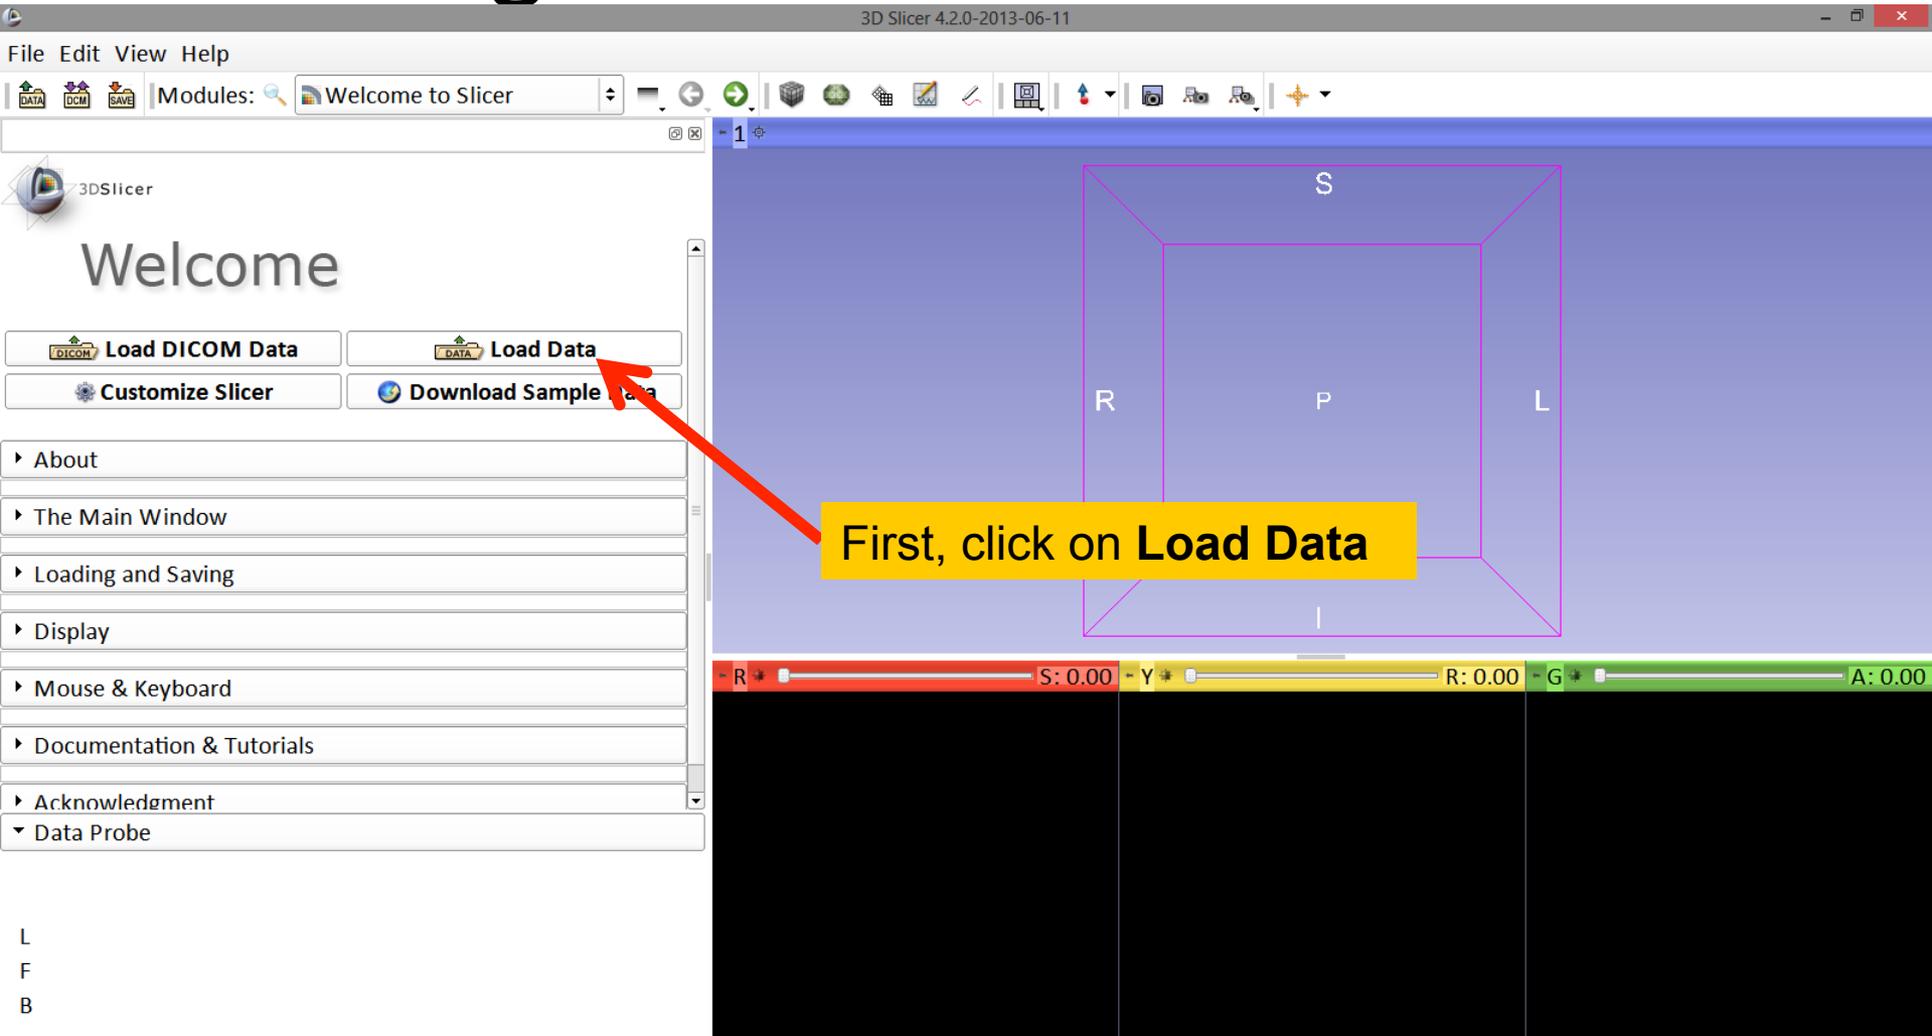

$$S_i = S_0 e^{-b \hat{g}_i^T \underline{D} \hat{g}_i}$$

(Stejskal and Tanner 1965, Basser 1994)

$$\underline{D} = \begin{bmatrix} D_{xx} & D_{xy} & D_{xz} \\ D_{yx} & D_{yy} & D_{yz} \\ D_{zx} & D_{zy} & D_{zz} \end{bmatrix}$$

Loading DTI and Baseline Data

Loading DTI and Baseline Data

The screenshot shows the 3D Slicer interface with the 'Add data into the scene' dialog box open. The dialog has two tabs: 'Choose Directory to Add' and 'Choose File(s) to Add'. The 'Choose Directory to Add' tab is active, showing a table with columns for 'File' and 'Description'. A red arrow points to the 'Choose Directory to Add' button. A yellow callout box contains the text: 'The "Add data into the scene" window appears. Click **Choose Directory to Add**'.

Part 1: Segmenting the tumor and ventricles

Tumor Segmentation

The tumor in this clinical case is composed of two parts: a solid part, and a cystic part.

In this section, we will segment the different parts of the tumor using a Grow Cut Segmentation algorithm.
